Sorting by Default

Default Sorting on Search Pages

First Sort by [store view] Price

Then by [store view] Product Name

Then by [store view] --Please Select--

Default Sorting on Category Pages

First Sort by [store view] Position

Synced with Configuration -> Catalog -> Storefront -> Product Listing Sort by

Then by [store view] --Please Select--

Then by [store view] --Please Select--

- Please choose the default descending attributes for them. No ascending sorting will be given to selected attributes.
- Show Products without Images Last - to efficiently control your inventory, show or hide products without images.
- Show 'Out of Stock' Products Last - select the variant to maximise the 'Out of Stock' product role.
- Use qty to determine if the product is 'Out of Stock' - allow this option to automatically place products on the 'out of stock' list. Products of qty < 1 are last shown irrespective of the stock label.

Products from orders with selected states will not be used in the Bestsellers.

- Bestsellers - Shows statistically best-selling products.
- Bestsellers Period (days) - For the time specified here the sorting option shall be counted. So if you specify here '15,' you can count sales for the last 15 days and set the order for the bestseller sorting option by count. Leave your statistics vacant for lifetime.
- Custom Bestsellers Attribute - to move products manually in the bestseller list select a custom bestseller attribute.
- Exclude Orders Statuses - the Bestsellers shall not be used for products with specified order statuses.

Sorting Extension for Magento2 by Mavenbird

The screenshot shows the 'Most Viewed' configuration page. On the left is a sidebar with a menu: GENERAL, CATALOG, SECURITY, CUSTOMERS, SALES, SERVICES, ADVANCED, MAVENBIRD EXTENSIONS, and Improved Sorting. The main content area has a 'General' tab selected. It lists sorting options: 'Sorting by Default', 'Newest', 'Bestsellers', and 'Most viewed'. The 'Most viewed' option is expanded, showing three fields: 'Label' (with a sub-label '[store view]'), 'Most Viewed Period (days)' (with a sub-label '[global]' and a value of 90), and 'Custom Most Viewed Attribute' (with a sub-label '[store view]' and a dropdown menu). Each field has a description: 'Rename sorting option to match your own vision.', 'Leave empty for life-time statistics.', and 'Use to artificially move some products up in the real most viewed list. Leave empty to show real data.'

- Most viewed - products are displayed in accordance with the number of views. For the period indicated by the Most Viewed Period, this sorter option is counted (days). Don't forget to rename your own vision sorting option.
- Custom Most Viewed Attribute - use some products in the real most viewed list to move artificially. Let the actual data appear empty.

The screenshot shows the 'Biggest Saving' configuration page. It has the same sidebar as the previous image. The 'Biggest Saving' option is selected in the list. It shows two fields: 'Label' (with a sub-label '[store view]') and 'Use Percentage for Biggest Saving Sorting' (with a sub-label '[store view]' and a dropdown menu set to 'No'). Both fields have the description: 'Rename sorting option to match your own vision.'

- 'Biggest Saving' - shows at the top of the list products with the biggest discount. To show the difference between regular and special prices, you can use the percentage or the absolute values. You've got products A & B, for example. It costs \$100, and the discount is 10%, so special \$90 pricing is available. Product B costs \$10 at a special price of 50% discount of \$5. If a percentage of product B (50 percent off) is sorted out in the "Biggest Saving" list, it is indicated above product A. If you decide to sort by absolute prices, product A will appear in the list before product B.

- Price: high to low or low to high - the price differentiation of this option sorts items. The title of this option can also be customised

Sorting Extension for Magento2 by Mavenbird

Sorting on frontend

In addition to standard Magento options on the front end, the new sorting options and widgets allow your customers to find the right product faster. Additionally, Ratings and reviews by other people can really help your clients.
